To be provided by venue:

- PA system
- 2x XLR cable stage to FOH
- Stable adjustable microphone stand with boom arm
- Projection equipment (FHD projector and screen, HDMI cable stage to projector)

Key information:

EXCAELIS delivers a full mix via balanced stereo signal that just needs to be reproduced over the PA.

EXCAELIS utilizes in-ear monitoring (IEM) and requires no additional stage monitoring.

EXCAELIS employs live looping and at times vast amounts of reverb. Despite using specialized equipment (Audix OM7, OptoGate PB-05 M, Behringer Shark DSP110), the stage should ideally be sonically isolated as much as possible to prevent microphone spillage and feedback.

The projection laptop should be securely placed within an unobscured range of 5 meters (max. 10 meters) from the mic stand, where it can be remotely controlled (Bluetooth). The laptop can be placed offstage.

If you have any questions or encounter difficulties meeting these requirements, please don't hesitate to contact EXCAELIS at i@excaelis.net. I'll be happy to work together and find a solution.
